Subject: additional ionformation to be added to bill no.6014

Proposed H.B. No. 6014 AN ACT CONCERNING THE SAFE USE OF ELECTRONIC DEFENSE WEAPONS If Public Safety Committee truly wants truth for the publics safety they should be sure every police house implement the evidence.com from Tazer therefore there will be no doubt of what had happened during the tazer weapon used. Also when ever the tazer weapon is used there without any doubt should have the recording/video and audio from.. the weapon used in court immediately without hesitation. The video and audio is stored in the weopon in a item called the 'Native File' . The way things are happening now when a person gets tazed and goes to court asking for the video audio recording from the tazer weapon used in the incident. The police plug the weapon into a computer by a USB cord download it into the hard drive of said computer then record the audio and video on to a disk. You must take into consideration that when asking for this information police have the ability to only give enough evidence that they think seems fit [another words just enough] not the whole ball of wax [so to speak] After it's in the hard drive and the police record it onto a disk they can add things from other tazer incidents and not record [skip] things that happened during the incident at hand , therefore nor getting the whole scenario. With the Evidence.com in place this type of manipulation will be obsolete. This evidence.com should be in every police station that uses tazers. because this will be a true accountability feature, which is why the 'Native 'File' is there in the first place to hold the user accountable for their actions but it still can be manipulated, but not with the evidence.com feature. thank you please see below the evidence.com feature

The firing report I received has the Taser logo and the EVIDENCE.COM logo on the top of the first page. EVIDENCE.COM is Taser's secure cloud storage service. To understand what that means, the following is a quote from the Taser/EVIDENCE.COM webpage:

"EVIDENCE.COM is a full featured digital evidence management solution that allows the agency to securely store and track access to any type of digital evidence including AXON Flex videos, digital photos, videos from still cameras, reports (such as officer reports and witness statements), and download records from all TASER CEW devices in a highly secure, easily accessible environment."

If one is to interpret the presence of the EVIDENCE.COM logo to mean that the firing records were generated from the EVIDENCE.COM cloud storage service, then I would think it logical that the system also provides a way for police departments to upload the ALL video clips for safe keeping, and if so the original native clips and download report may be there also. the download report ARE important so it can be confirmed all segments of the video were downloaded and provided.

The main reasoning
